1. SCOPE:

XD671N, LVDS series, high reliability hybrid microcircuit crystal oscillators are designed, produced and tested by Xsis Electronics, Inc. as MIL-PRF-55310, Class "S" equivalent devices for use in advanced industrial, military, avionics and space applications. These devices are of hybrid microcircuit technology conforming to MIL-PRF-55310, Type 1, Class 2 oscillators.

100% Screening and QCI are performed per **EEE-INST-002**.

- 1.1 ALTERNATE MODELS: Alternate models, XD671E, XD671B and XD671P with reduced QCI and/or reduced screening and shorter lead times are also offered as explained on page 5.

2. APPLICABLE DOCUMENTS:

MIL-PRF-55310F	Oscillator, Crystal Controlled, General Specifications for
MIL-PRF-38534K	Hybrid Microcircuits, General Specifications for
MIL-STD-883L	Test Methods and Procedures for Microelectronics
EEE-INST-002	Instructions for EEE Parts Selection, Screening, Qualification and Derating

3. REQUIREMENTS:

- 3.1 General: The individual item requirements shall be as specified herein.

- 3.2 Package: Ceramic, 90% Min. AL₂O₃, Weight: 0.6 Gms Max., Thermal Resistance, θ_{JC} : 28 °C / Watt.

- 3.2.1 Lead Material & finish: Kovar, 50 to 85 micro-inches gold over 100 to 250 micro-inches nickel. Hot Solder tinning with Sn63/Pb37 solder per MIL-PRF-55310 is optional at an additional cost.

- 3.2.2 Reflow Soldering: Reflow soldering at 260 °C for 10 seconds shall not degrade the performance.

- 3.3 Hermeticity: Resistance welded, hermetically sealed, leak rate of 1(10)⁻⁸ atm-cc/s Max.

- 3.4 Marking: As a minimum, the parts shall be marked with Xsis P/N, ESD symbol, date code and serial number.

- 3.5 Absolute Maximum Ratings: Unless otherwise specified, absolute maximum ratings shall be as follows:

Supply Voltage	-0.5 to +4.5 VDC
Operating Free-Air Temperature Range	-55 °C to +125 °C
Storage Temperature	-55 °C to +125 °C

- 3.6 Electrical Characteristics: See Table I

- 3.6.1 Total Dose Radiation: Hybrid Microcircuit Crystal Oscillators shall be capable of meeting the electrical characteristics of Para. 3.6 after being exposed to total ionizing dose radiation of 100 krad as per MIL-STD-883, method 1019.

3.7 Hybrid Elements:

- 3.7.1 Quartz Crystals: High grade cultured quartz crystal shall be used. As an option, Xsis will use premium Q swept quartz crystal at an additional charge, refer to part numbering example in paragraph 6 to specify swept quartz crystal. Crystal element evaluation shall be in accordance with MIL-PRF-55310.

- 3.7.2 Crystal Mounting: Crystal element shall be mounted at 4 points in such a manner as to provide adequate ruggedness and performance under extreme environments specified herein.

- 3.7.3 Passive Elements: Established Reliability (ER) QPL components, failure level R minimum shall be used or element lot evaluation shall be as per MIL-PRF-55310, class S, or MIL-PRF-38534, Appendix C, Class K as applicable.

SHEET

2 OF 10

- 3.7.4 Microcircuit die shall be from lots that have passed the element evaluation per MIL-PRF-38534, Level K. In addition, ionizing radiation testing shall be performed at the oscillator level as explained in paragraph 3.7.5. herein.
- 3.7.5 Microcircuit die used in the oscillator shall be from wafer lot that has been successfully tested in the oscillator for ionizing radiation of up to 100 krads and is known to be Single Event Latch-up immune for LET of up to 95 Mev-cm²/mg.
- 3.7.6 Workmanship: Assembly, Rework and Process controls shall be in accordance with the requirements of MIL-PRF-55310 & MIL-PRF-38534 as applicable.
- 3.7.7 Lot Traceability: Production lot for these oscillators shall be homogenous. Each element used in the production lot shall be traceable to a single lot. Swept quartz shall be traceable to the quartz bar, and its applicable processing details.
- 3.7.8 Prohibited Materials: The following items shall not be used in these oscillators: Pure Tin (Sn >97%), Cadmium, Zinc, Mercury, Selenium, Silver as under plate, and Gold Plating without a nickel barrier.
- 3.7.9 Element Derating: All active and passive elements shall be derated in accordance with the applicable Hybrid microcircuit requirements of MIL-STD-975. Elements shall not operate in excess of derated values.
- 3.7.10 Material Outgassing: All materials shall meet a TML of 1% Max. and a CVCM of 0.1% Max., when tested in accordance with ASTM E595.

4. QUALITY ASSURANCE PROVISIONS: The quality assurance provisions shall be as specified herein.

- 4.1 100% Screening: The 100% screening shall be performed in accordance with EEE-INST-002 and as specified in Table II. In addition, MIL-PRF-38534 Group B Option 1 in-line inspection for bond strength and die shear shall be performed at pre-seal inspection. PDA requirements for nondestructive bond pull, burn-in and frequency aging shall be as specified below.
- 4.2 PDA for Non-destruct Bond Pull: Unless otherwise specified, PDA shall be 2% of total number of wires or 1 wire whichever is greater.
- 4.3 PDA for Burn-in and Frequency Aging Failures: Unless otherwise specified, PDA for burn-in failures, applicable to +23 °C and/or +25 °C static tests only, and frequency aging failures combined shall be 5% or 1 part whichever is greater. In addition, delta calculations for input current shall be performed after burn-in at the specified nominal supply voltage. All parts that exceed the specified limits below shall be rejected and be counted for PDA.

Input Current	10% change Maximum
Frequency Aging/30 days	Refer to the specified limit in Table I

- 4.4 Qualification Inspection: Devices shall be capable of meeting the qualification inspection shown in Table III. When required by the purchase order, qualification inspection shall be performed as per Table III on sample units selected from the units that have successfully passed 100% screening specified herein. Number of sample units shall be as specified in Table III. With customer approval, generic qualification inspection data on similar parts may be used to satisfy this requirement, except for Subgroup 5 which needs to be performed on a lot specific basis unless otherwise specified by the customer.
- 4.5 DPA: When required by the purchase order, Destructive physical analysis as per GFSC S-311-M-70 shall be performed on a number of sample units as required by the purchase order by a laboratory approved by the customer.

XSIS ELECTRONICS, INC. 12620 W. 63 rd St., Shawnee, KS 66216 USA Tel: 913-631-0448 e-mail: xsis@xis.com website: www.xsis.com	FSC NO. 57051	DWG. NO. XD671N	REV A
	SCALE N/A	SHEET 3 OF 10	

4.6 Inspection and Test Data: Unless otherwise specified in the purchase order, the following Inspection and test data documentation shall be supplied with the parts.

(See Page 5 for the description of the Model Numbers other than XD671N)

Model XD671N:

- Certificate of Conformance
- Summary of 100% Screening Test Results
- PDA Calculations for Non-Destruct Bond Pull, Burn-in and Frequency Aging
- Summary of Elements Lot Traceability
- Electrical Tests data taken during 100% screening
- Radiographic Inspection Certificate
- Qualification data if required by the purchase order
- DPA report if required by the purchase order
- Qualification and DPA test samples as applicable

Model XD671E:

- Certificate of Conformance
- Summary of Screening Test Results per Table IV
- Summary of Elements Lot Traceability
- Group A Inspection Summary
- Radiographic Inspection Certificate

Model XD671B:

- Certificate of Conformance
- Summary of Screening Test Results per Table IV
- Group A Inspection Summary
- Radiographic Inspection Certificate, if required by the Purchase Order

Model XD671P:

- Certificate of Conformance

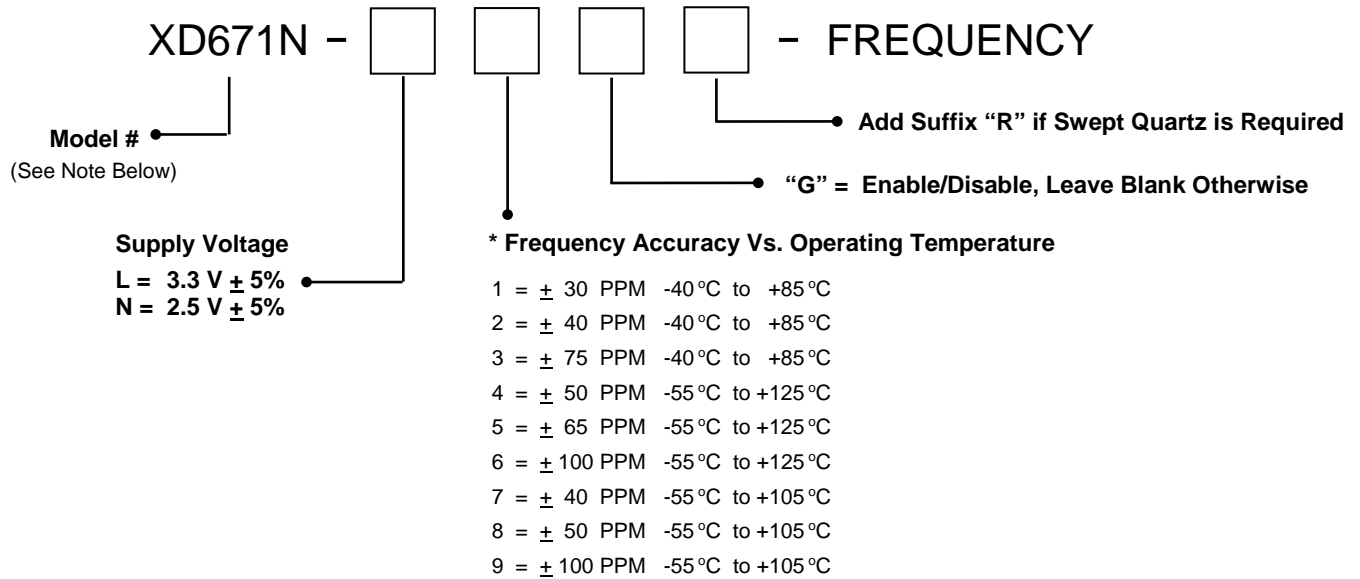

4.7 The following test and inspection options are available at customer request.

- Customer Source Inspection for Pre-Cap and Final
- DPA (Destructive Physical Analysis)
- Qualification Inspection per Table III

5. PRESERVATION, PACKAGING AND PACKING: The oscillators shall be clean, dry and packaged in a manner to provide adequate protection against electrostatic discharge, corrosion, deterioration and physical damage during shipment.

XSIS ELECTRONICS, INC. 12620 W. 63 rd St., Shawnee, KS 66216 USA Tel: 913-631-0448 e-mail: xsis@xis.com website: www.xsis.com	FSC NO. 57051	DWG. NO. XD671N	REV A
	SCALE N/A	SHEET 4 OF 10	

6. PART NUMBERING EXAMPLE:

* Overall Frequency Accuracy includes effects of Operating Temperature, ± 5% Supply Voltage & ±10% Load variations.

P/N Example: XD671N - L4 - 100.000 MHz = 100.000 MHz, 3.3V Oscillator, ± 50 PPM Frequency Accuracy compared to specified nominal frequency over an operating temperature range of -55 °C to +125 °C.

NOTE: Besides **Model XD671N** above, the following additional models are available for applications that can accommodate reduced level of Elements, Screening and Quality Conformance inspection:

XD671E: Model XD671E uses the same design & elements as **Model XD671N** except as follows,
 100% screening is as per Table IV herein
 PDA for Burn-in is 10% or 1 unit whichever is greater
 Delta measurements of paragraph 4.3 are not applicable
 Group A inspection is as per MIL-PRF-55310, Class B

XD671B: Model XD671B is same as **Model XD671E** except as follows:
 Active and Passive Elements are as per MIL-PRF-38534, Class H. Microcircuit die is similar to the one used in **Model XD671N** but is not from radiation tested wafer lot.
 Radiographic Inspection is not applicable.

XD671P: Model XD671P is a form, fit and function equivalent prototype of **Model XD671N**.
 Prototypes may use commercial grade elements. 100% screening and quality conformance inspection are not applicable.
